Summary

Full-stack developer with nearly 4 years of professional experience building internal web systems, maintaining a legacy CRM, and integrating APIs (Meta, OpenAI, Stripe). I'm currently co-developing Big Tiny Heroes, a live 3D browser MMORPG built with TypeScript, React, Three.js and Node.js. On it, I've shipped 214 commits across gameplay, physics, audio, tooling and the admin platform. I work with Docker, Git workflows and automated testing, and I'm comfortable owning features end to end.

Technical skills

Area	Technologies
Languages	TypeScript, JavaScript, PHP, SQL, HTML5, CSS3, GLSL, Python (basic)
Front-end	React 19, Zustand, Zod, Three.js / WebGL, jQuery, Ajax, Bootstrap, Tailwind, responsive design
Back-end	Node.js, Fastify, Colyseus (real-time WebSocket), PHP
Databases	MySQL, SQLite, Redis
DevOps & tools	Docker / Docker Compose, Nginx, Linux (Ubuntu), SSH, WSL, Git, GitLab, GitHub, Git LFS
Integrations	Meta API, OpenAI API, Stripe (Checkout and webhooks), Google and Discord OAuth, GitHub Issues API
Quality	Playwright (E2E), unit testing, type checking, debugging and refactoring legacy code

Experience

GameStrike — Full-Stack Game Developer · Jul 2026 – Present

Big Tiny Heroes is a live 3D browser MMORPG with a server-authoritative real-time multiplayer backend (Colyseus, up to 30 players per room). We are a two-developer team on a TypeScript monorepo of about 113k lines of code with 135 test files. My 214 commits:

- **Gameplay:** built the stamina system, hero death and revive, mob combat effects (thorns, life steal), consumables with randomized rewards, a quest tracker, and quest-gated portals and NPC visibility.
- **Physics & collision (Rapier 3D):** added trimesh and primitive colliders for walls, portals, walkable floors and water volumes, plus map bounds and hero step height and ground snapping.
- **Graphics (Three.js):** made flags and banners with cloth animated by a custom GLSL vertex shader.
- **Audio:** built the full music, ambience and SFX system, with separate volume controls, spatial zones with crossfades, editor-placed audio areas and rain ambience.
- **Tooling & content:** wrote tested procedural map generators in TypeScript for 4 regions and multi-chapter narrative quest chains. Improved the map editor with spawn markers, typed-in positions and collision volumes.
- **Platform:** gave moderators search, restrictions and warnings in the admin panel. Built in-game bug reporting that files GitHub Issues, AI-translated (OpenAI) global chat announcements in pt-BR, en and es, and draggable UI panels that remember their layout.

Fhits — Web Developer · Oct 2025 – Present

- Maintain and extend internal systems in PHP, JavaScript, Ajax, HTML and CSS: bug fixes, business-rule changes and new features.
- Maintain integrations with the Meta API and the ChatGPT API.
- Write MySQL queries and data fixes and keep data integrity.
- Support internal teams, resolve critical incidents, and improve UI/UX and responsiveness.

Ecoassist — Junior Web Developer · May 2025 – Oct 2025

- Maintained a legacy CRM in PHP, JavaScript, jQuery and Bootstrap: debugging, refactoring and UX improvements.
- Used GitLab branching, merge requests and conflict resolution, and recovered commits for staging and test environments.

- Used Docker, SSH and WSL for remote servers and local development, and fixed MySQL data via phpMyAdmin.

Fhits — Junior Systems Development Analyst · May 2022 – Jun 2024

- Developed front-end and back-end features for the company's internal system in PHP, JavaScript, Ajax, HTML and CSS.
- Implemented and optimized integrations with the Meta API and the ChatGPT API.

Earlier experience

- **Wisp Resort (Maryland, USA) — Summer Worker** · Dec 2021 – Mar 2022: work program in the US, with daily English immersion.
- **1001 Cupons — Support** · Oct 2021 – Nov 2021: SEO, digital marketing and web copywriting.
- **TravelMate Exchange & Tourism — Intern** · Feb 2018 – Feb 2019: promotional design, email marketing, social media and customer support.

Personal projects

- ecommerce (TypeScript): white-label e-commerce platform with storefront, setup wizard, sandbox checkout, admin panel and reports.
- framework (TypeScript): modular web framework for business data systems (CRM, ERP, finance, dashboards).
- mini-seller (React + Tailwind): lightweight CRM for leads and opportunities.
- microfrontend (TypeScript): micro-frontend architecture.
- price_scrapper (Python): price scraper for online stores.

Education

- **Associate degree in Internet Systems (Tecnologia em Sistemas para Internet)**: FATEC, São Paulo State Technological College, 2016. Final project: activity-hours management system for FATEC campuses.

Certifications

- Google Analytics Advanced and Google Analytics for Beginners (Google, 2019)
- Google Ads Fundamentals (Google, 2019)
- Programming Logic (SENAI, 2015)

Languages

- **Portuguese:** native
- **English:** professional working proficiency. Worked in the US in 2021, study daily, and use it every day for technical documentation.

Other

- Video game columnist at CtrlZeta (2015–2020).
